

Project Information

- **Project Name:** E-Commerce Web Application
- **Test Type:** Manual Functional Testing
- **Test Environment:** Web Application
- **Browser:** Google Chrome Version 144.0.7559.60 (Official Build) (arm64)
- **OS:** macOS
- **Tester:** Hardik Dagia
- **Test Duration:** 5 days

Objective of Testing

The objective of this testing was to verify the functionality, usability, and reliability of the e-commerce web application, ensuring that critical features such as user authentication, product purchase, cart operations, and checkout work as expected.

Scope of Testing

In Scope

- User Registration, Login, Logout
- Product Search and Filtering
- Cart and Checkout
- Address Book
- Product Returns
- Wishlist and Reviews
- Payment functionality
- UI and validation checks

Out of scope

- Performance testing
- Security testing
- Cross-browser testing
- Automation testing

Test Execution Summary	
Criteria	No.
Total test scenarios	48
Total test cases executed	41
Passed	35
Failed	5
Observed	1
Blocked	0

Defect Summary	
Severity Breakdown	No.
High	2
Medium	2
Low	1
Total Defects Logged	5

Test Conclusion / Recommendation

- Most critical defects were related to payment processing and form submission, which could impact user experience and business revenue.
- Based on the testing performed, the application has several functional issues that need to be resolved before production release, especially related to payment and form submissions.
- Once high-severity defects are fixed and retested, the application will be ready for release.
